

Journal Assignment 5

Math 203 Contemporary Mathematics

Due on November 11

This assignment is an opportunity to influence the curriculum.

Look through chapters 9-21 of the textbook. We will definitely be covering chapters 9 and 12, but we have some freedom in choosing which other chapters to study. I have tentatively planned to do chapter 14, but that could be changed. Which chapter or chapters look most interesting to you? Which look least interesting? Which have you seen some of before? Conclude your journal with a list of three chapters, you would like to study.

Submit your journal by e-mail (not attachment) to winther@math.unl.edu by midnight on the due date.
