3342 Review: Chapters 1 - 3

Terms and Representative Problems

Chapter 1
x-bar chart 6
population of units
(statistical) population
sample

Chapter 2
Pareto diagram 1-2
dot diagram 3-6
outlier
frequency distribution 9, 12, 14
class limits
class frequencies
class sizes
class boundaries
class marks
cumulative frequency distribution 10, 13, 15
histogram 9, 12, 14
ogive 10, 13, 15
stem-and-leaf plot 22-23
(sample) mean 28-30, 32-33
median 33
mode
(sample) variance
(sample) standard deviation 28-30
coefficient of variation
quartiles 37
\( Q_1, Q_2, Q_3 \)
range
interquartile range
box plot 35, 39
calculator formula 34, 36
grouped data formulas 41, 42

Chapter 3
experiment
sample space 8
outcome
event 12
discrete
continuous
mutually exclusive
union
intersection
complement
Venn diagram 12
tree diagram 14-15
Multiplication Rule 17-18
permutation \( nPr \) 20-21
combination \( \binom{n}{r} \) 23-27
classical probability 28-31
probability axioms (3) 35, 42-43
generalized axiom 44
addition rule for probability 46-48
\[ P(A \cup B) = P(A) + P(B) - P(A \cap B) \]
complement rule for probability
\[ P(\bar{A}) = 1 - P(A) \]
conditional probability 59, 64-65
\[ P(A | B) = \frac{P(A \cap B)}{P(B)} \]
independence 66-68
multiplication rule for probability 71-72, 75
\[ P(A \cap B) = P(B) P(A | B) \]
exhaustive collection of events
rule of total probability 73
bayes theorem 74
expectation 81-82, 85, 87, 90
fair 84
