

Information regarding course projects

Trying to learn mathematics by memorizing instead of reasoning is absurd and counterproductive. The course projects are intended to complement your homework by helping you focus on understanding certain ideas behind mathematical concepts.

The average grade of the three projects will count up to **10 bonus** points towards your total course points.

Individual projects will be each graded on a 10 point scale as follows: each problem will be assigned 1 point if totally correct and 0 otherwise. The total points earned will be scaled to 10 points.

There will be no partial credit. Only answers that are fully correct will receive credit. In order to receive credit for a problem all the work must be shown and the formulas used as well as the final answers must be boxed.

Projects must be turned in on time. Late projects will not be accepted under any excuse.

You may (and are encouraged to) work in groups. However, every student must turn in a project individually.
